Abdalla Samir Khalifa

Java Developer

(+20) 01067504124 | Cairo, Egypt | github.com/AbdallaSamirKhalifa
abdallasamirkhalifa@gmail.com | linkedin.com/in/abdalla-khalifa

Disciplined Software Engineer committed to continuous learning and driven to contribute to business growth through high performance, maintainable systems. I am eager to scale my expertise to deliver the architectural integrity and operational efficiency required for our collective success.

Education

Bachelor's degree in Management Information Systems, *Higher Institute of Management Science* June 2025
Grade: *Very Good, Equivalent to 3.0 GPA*

Skills

Languages : Java 8+ Features, SQL, PL/SQL.
Frameworks: Spring Framework, Spring Boot, Spring Web, Spring Security, Jakarta Persistence (JPA), Hibernate, Spring Data JPA.
Database: MySQL, PostgreSQL
Developer Tools: Docker, Git, Linux, Maven.
Concepts & Methodologies: Design Patterns, RESTful API Design, Database Design, Query Optimization, Normalization/De-Normalization, Performance Tuning (Indexing), System Analysis and Design .
Other: JavaScript, CSS, HTML.

Projects

E-Commerce Backend Platform

Tech Stack: Java 17, Spring Boot 3+, Spring Data JPA, Spring Security, Spring SMTP, Docker, Docker Compose, Maven, Git.

- Engineered an e-commerce REST API using **Spring Boot 3** and **Spring Security**, supporting product catalog browsing, cart management, and secure checkout flows for product and categories.
- Integrated **Spring SMTP** to automate welcome and order-confirmation emails on registration and checkout events.
- Secured API endpoints with, Basic authentication, and (RBAC) to enforce role-based access control.
- Containerized app stack with **Docker Compose**, enabling one-command deployment across API, **PostgreSQL**, and mail server services.
- Built a global exception handler standardizing error responses across all Spring Boot API endpoints.

Database Design & Optimization

Tech Stack: PostgreSQL, MySQL, Git.

- Engineered a **PostgreSQL** relational schema for 50M+ records, used **EXPLAIN ANALYZE** to identify bottlenecks and applied B-Tree indexing, reducing query latency by **98.8%** (613ms → 7ms)
- Built a denormalization layer maintained by **PL/pgSQL** triggers, achieving a **99.9% performance improvement** on analytical revenue queries
- Validated schema decisions through MySQL benchmarking on 6M records, demonstrating a **119% increase in QPS** via composite indexing

Language

Arabic (fluent speaker) **English** (Professional Working Proficiency)
