SUMMARY

Disciplined Software Engineer committed to continuous learning and driven to contribute to business growth through high performance, maintainable systems. Eager to scale my expertise to deliver the architectural integrity and operational efficiency required for our collective success.

PROJECTS

Food Delivery Backend Platform | Github Repo

- **contributed** to the development of RESTful APIs, and analysis of a feature-based platform handling restaurants, carts, and order management within a 3-developer team environment, adhering to a strict Main/Dev/Feature Git branching model.
- **implemented** stateless JWT authentication to accommodate both B2B and B2C business models, enforcing role-based access control and distinct security layers for customer and administrator roles.
- **collaborated** on building the foundational relational schema and DDL scripts, implemented core Spring Data JPA entities and repositories, and participated in peer code reviews, refactoring, and resolving git conflicts, alongside writing unit tests to maintain system integrity.
- **containerized** the application and database infrastructure utilizing Docker & Docker Compose to establish a uniform development environment and facilitate seamless team collaboration.

E-Commerce Backend Platform | Github Repo

- **developed** a Spring Boot 3 RESTful API for an e-commerce platform, facilitating seamless product catalog browsing, cart management, and secure checkout processing.
- **secured** application endpoints by implementing stateless JWT authentication and Role-Based Access Control (RBAC) to protect sensitive data, alongside building a global exception handler to standardize error responses.
- **integrated** Spring Email to manage asynchronous user communications, sending welcome notifications and order confirmations.
- **containerized** the application stack and PostgreSQL database utilizing Docker Compose to streamline backend deployment and ensure a consistent runtime environment.

Database Design & Optimization | Github Repo

- **engineered** a PostgreSQL relational schema for 50M+ records, identified bottlenecks and applied B-Tree indexing, reducing query latency by **98.8%** (from 613ms to 7ms).
- **built** a denormalization layer, achieving a **99.9%** (from 16sec to 12ms) performance improvement on analytical revenue queries.

SKILLS

Languages : Java, JavaScript, TypeScript, HTML/CSS, SQL (PostgreSQL, MySQL)

Frameworks : Spring framework, Spring boot, Spring web, Spring security, JWT, Jakarta Persistence (JPA), Hibernate, Spring Data JPA, Angular

Concepts & Methodologies : Design patterns, RESTful API design, Database design, Query optimization, Normalization/De-normalization, Performance tuning, System analysis and design, Unit testing, Agile.

Tools : Docker, Git, Linux, Maven, LLM assisted development

Other : Team collaboration, Problem solving, Time management

CERTIFICATIONS

DeepLearning.AI <i>Introduction to Generative AI for Software Development</i>	May 2026
---	----------

EDUCATION

Higher Institute of Management Sciences <i>Bachelor of Management Information Systems</i>	October 2021 – June 2025 Very Good / GPA: 3.02
---	---

LANGUAGES

Arabic: Native	English: Professional Working Proficiency
