SUMMARY

Java Backend Developer specializing in Spring Boot, RESTful APIs, and PostgreSQL. Focused on building scalable, high-performance backend systems that solve real business problems and improve system efficiency. Passionate about applying software engineering principles and delivering measurable business value.

PROJECTS

Food Delivery Backend Platform 🔗

- Developed scalable RESTful APIs for a food delivery platform supporting restaurant operations, order lifecycle, and cart management with feature-based architecture.
- Implemented stateless JWT authentication with role-based access control for B2B/B2C models, OTP login, and integrated email services for user notifications.
- Collaborated to relational database schema design, implemented persistence layer, conducted unit and integration testing, and containerized our services using Docker & Docker Compose for consistent development.

Database Design & Optimization 🔗

- Designed & Optimized PostgreSQL schema for 50M+ records, using advanced query optimization techniques including indexing, query rewriting, and execution plan analysis to reduce query latency by **98.8%** (613ms to 7ms).
- Implemented a denormalization layer, improving analytical revenue query performance by **99.9%** (16sec to 12ms).

E-Commerce Backend Platform 🔗

- Developed a Spring Boot 3 RESTful API for an e-commerce platform, handling catalog, cart, and checkout.
- Implemented stateless JWT authentication and RBAC for secure endpoints and data protection, and integrated email services for customer notifications.
- Containerized the services with Docker Compose for streamlined deployment.

SKILLS

Programming Languages : Java, SQL

Backend Development : Spring Boot, Spring Web, Spring Security, Spring Data JPA, Hibernate, RESTful APIs, JWT, Swagger/OpenAPI.

Databases : PostgreSQL, MySQL, Database Design, Performance Tuning.

Testing : JUnit, Mockito, Testcontainers, Unit Testing, Integration Testing.

DevOps & Tools : Docker, Git, Maven, Linux.

Software Engineering : UML, DSA, OOP, Design Patterns, Solid Principles, System Design, Agile, Problem Solving.

Frontend Development (basic) : Angular, JavaScript, TypeScript, HTML/CSS.

CERTIFICATIONS

DeepLearning.AI

May 2026

Introduction to Generative AI for Software Development 🔗

EDUCATION

Higher Institute of Management Sciences

October 2021 – June 2025

Bachelor of Management Information Systems

Very Good / GPA: 3.02/4.0

LANGUAGES

Arabic: Native

English: Professional Working Proficiency
